

Serial No. 08/787,651

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

LISTING OF CLAIMS:

- 1 1. (original) A method for assembling carbon particles into at least one fiber, the
2 method comprising the steps of:
3 aligning said carbon particles by flowing a mixture of said carbon molecules and a
4 curable liquid down a tapering tube starting at a first end of said tapering tube; and
5 curing said flowing mixture at least near a second end of said tapering tube
6 whereby a fiber is formed.
- 1
1 2. (original) The invention as defined in claim 1 further comprising the step of
2 dispersing said carbon particles within said curable liquid to form said mixture.
- 1
1 3. (original) The invention as defined in claim 1 wherein said curable liquid cures,
2 at least in part, in the presence of ultraviolet light.
- 1
1 4. (original) The invention as defined in claim 1 further comprising the step of
2 heating said fiber so as to cause at least some volatile elements therein to substantially
3 dissipate therefrom.
- 1
1 5. (original) The invention as defined in claim 1 further comprising the step of
2 twisting said fiber.
- 1
1 6. (original) The invention as defined in claim 1 further comprising the step of
2 increasing the density of said fiber.
- 1
1 7. (original) The invention as defined in claim 1 comprising the step of heating
2 said fiber.

Serial No. 08/787,651

1 8. (original) The invention as defined in claim 1 comprising the step of sintering
2 at least some of said carbon particles within said fiber.

1
1 9. (original) The invention as defined in claim 1 comprising the step of cladding
2 said fiber.

1
1 10. (original) The invention as defined in claim 1 comprising the step of spooling
2 said fiber onto a take-up drum.

1 11. (Currently amended) The invention as defined in claim 1 wherein said curable
2 liquid ~~is~~ comprises at least one of the group consisting of:
3 (i) a copolymer of (a) methylmethacrylate with (b) the ester of methacrylic acid
4 and anthacetyl methanol; and
5 (ii) PS2067.

1 12. (original) The invention as defined in claim 1 wherein carbon particles
2 comprise at least carbon nanotube molecules.

1 13. (original) The invention as defined in claim 1 wherein carbon particles
2 comprise at least carbon fibrils.

1 14. (withdrawn) A fiber produced by the process defined in claim 1.

1 15. (original) The invention as defined in claim 1 wherein said curing step is
2 performed, at least in part, by shining ultraviolet light upon said mixture.

1 16. (original) The invention as defined in claim 1 wherein said curing is
2 performed at least in part while said mixture remains within said tapering tube.

Serial No. 08/787,651

1 17. (original) The invention as defined in claim 1 wherein said tapering tube has a
2 portion that is at least partially translucent to ultraviolet light.

1 18. (original) The invention as defined in claim 1 wherein said curing is
2 performed at least in part after said mixture has exited from said tapering tube.

1 19. (original) A method for assembling carbon particles into at least one aligned
2 fiber, the method comprising the step of passing a curable liquid containing carbon
3 through a tapering tube, whereby said carbon particles become substantially aligned.

1 20. (original) The invention as defined in claim 19 wherein said carbon particles
2 are carbon nanotube molecules.

1 21. (original) The invention as defined in claim 19 wherein said carbon particles
2 are carbon fibrils.

1 22. (withdrawn) A carbon particle fiber comprising carbon particles that were
2 aligned at least in part by being flowed through a tapering tube as part of a curable liquid.

1 23. (withdrawn) The invention as defined in claim 22 wherein said carbon
2 particles are carbon nanotube molecules.

1 24. (withdrawn) The invention as defined in claim 22 wherein said carbon
2 particles are carbon fibrils.

1 25. (withdrawn) A carbon particle fiber comprising substantially only aligned
2 carbon particles that were aligned at least in part while intermixed within a carrier
3 substance.

Serial No. 08/787,651

1 26. (withdrawn) The invention as defined in claim 25 wherein said carbon
2 particles are carbon nanotube molecules.

1 27. (withdrawn) The invention as defined in claim 25 wherein said carbon
2 particles are carbon fibrils.

1 28. (original) A method for assembling carbon particles into at least one fiber,
2 the method comprising the steps of:
3 aligning said carbon particles by flowing a mixture of said carbon molecules and a
4 curable liquid down a tapering tube starting at a first end of said tapering tube;
5 curing said flowing mixture at least near a second end of said tapering tube using
6 ultraviolet light whereby a fiber is formed;
7 heating said fiber so as to cause any volatile elements from said solidified curable
8 liquid to substantially dissipate from said fiber;
9 twisting said fiber to increase its density; and
10 heating said fiber to sinter said carbon particles within said fiber.

1 29. (original) The invention as defined in claim 28 further comprising the step of
2 cladding said fiber.

1 30. (original) The invention as defined in claim 28 wherein said carbon particles
2 are carbon nanotube molecules.

1 31. (original) The invention as defined in claim 28 wherein said carbon particles
2 are carbon fibrils.
